

I'm an against HR4026! I'm a truck driver and XM Radio is providing a great service with their traffic and weather. And I really think it benifits the transportation industry. With the AM/FM you can only get traffic & weather reports in the morning or afternoon most of the time! With XM you get it 24/7. When I'm driving I'd like to know if there's a back up going through Indianapolis so I can avoid it or go around. The NAB is just getting scared. You and I know not everyone listens to satellite so they haven't lost all their customers if that's what they're afraid of. Why not just get them to share the bandwith!
